

PURITY

FROM SEDIMENTATION

Since the formation of the clay deposits during the Tertiary age, their water has been without any contact to ground or circulating waters. AQUA TERTIARY therefore is free from any anthropogenic influences or impurities.

The decisive difference between AQUA TERTIARY and recent water of today is the characteristic and clearly different ratio of the stable hydrogen and oxygen isotopes. This turns AQUA TERTIARY and thus our CLAYBORN WHISKY unique and unrepeatable.

CLAYBORN

WHISKY WITH HISTORY

Good whisky needs rest, time and exceptionally pure water to develop real potential. Refined with AQUA TERTIARY, the pure water, untouched for 35 million years, we connect two worlds: a Westerwald Single Malt Whisky combined with AQUA TERTIARY, the other »Westerwald Original«, which has never been seen before. With this water an excellent Single Malt is turned into a whisky with history: CLAYBORN WHISKY.

EXTRAORDINARY

Our whisky is protected from light and external influences in a bottle of black glazed Westerwald stoneware.

The ideal gift, not only for whisky lovers. Made in the Westerwald from Westerwald raw materials and bottled in original Westerwald stoneware bottles - produced from Westerwald clays. Only local resources are used for the production. You can use it e.g. for your business friends. CLAYBORN WHISKY as ambassador from the Westerwald region.

As a small gift or souvenir, our 5 cl mini bottle for 9.20 € is perfect. For people who are worth it to you, grab our 0.5 l CLAYBORN with bottling date and limited edition for 74 €. CLAYBORN tasting glasses are available in a set of 6 for 14 €.

FASCINATION CLAY

HANS-GEORG
FIEDERLING-KAPTEINAT

has been working with Westerwald clays for more than 35 years. As a geologist, he has travelled to almost all continents, bringing home not only clays but also whiskies from all over the world. The idea of combining both turned into the AQUA TERTIARY and CLAYBORN WHISKY idea.
